

BTNEXT version 02-08-2012

New feature and problem solved in version 02-08-12

- Improved the FM radio receiving and volume
- FM Radio control button are inverted. If you short press the “Left” and “Right” button, now you seek for a new station. If you long press you will change the recorded station (memory).
- The temporary Vox disable command now is permanent. If you press the “Back” button for 7 sec. you will disable the vox (a voice announcement will advise you). This status is remembered also if you turn off the unit. If you want to enable again the vox you must press again for 7 sec. the “Back” button (a voice announcement will advise you).
- The beep and voice announcement volume has been improved.

The firmware file name to be downloaded is: BTNext_02_08_2012.zip

To upload the firmware on the BTNext unit you need also the “BT updater” PC software.

We recommend to download the latest version of the BTUpdater software.

Remember to download the Quick guide file for the Software installer procedure and the explanation of all the features.
